

JBIS

Journal of the British Interplanetary Society

VOLUME 60

2007

| <i>Issue No:</i> | <i>Themes</i> |
|------------------|--------------------------------|
| 1 | Archaeology for Space |
| 2 | General Papers |
| 3 | General Papers Soviet Space |
| 4 | General Papers |
| 5 | General Papers |
| 6 | General Papers |
| 7 | General Papers |
| 8 | General Papers |
| 9 | General Papers |
| 10 | General Papers |
| 11 | Space Tourism |
| 12 | General Papers |

AUTHOR INDEX

| | | |
|---------------------------------|---|-----|
| Ashford D. | A New Space Strategy for Europe | 390 |
| Balint T.S. <i>et al</i> | Mitigating Extreme Environments for In-Situ Venus and Jupiter Missions | 238 |
| Balint T.S. <i>et al</i> | Can we Power Future Mars Missions? | 294 |
| Bannova O. | Design Considerations for Exterior and Interior Configurations of Surface Habitat Modules | 331 |
| Beech M. | Oscillation and Settling Times for Black-Holes Placed within Planetary and Stellar Interiors | 257 |
| Bertolami O. <i>et al</i> | Gravity Control Propulsion: Towards a General Relativistic Approach | 285 |
| Boggiatto D. <i>et al</i> | Technology for the European Next Generation Launcher: Integrated On-Ground and In-Flight Development Approach | 443 |
| Bonin G. <i>et al</i> | Venus Exploration using Piloted Flybys and Telepresence | 321 |
| Bousquet P.W. <i>et al</i> | Launch of CNES Small Satellites: Lessons Learned and Perspectives | 249 |
| Calero J.S. | The Awuarius, A Proposal for Nano-Satellite Launcher Vehicle | 367 |
| Carlotto M.J. | Detecting Patterns of a Technological Intelligence in Remotely Sensed Imagery | 28 |
| Challis K. | Archaeology's Cold War Windfall - The CORONA Programme and Lost Landscapes of the Near East | 21 |
| Clark S.D. <i>et al</i> | A Study of the Use of Electric Propulsion and Other Advanced Technologies on Small Spacecraft | 63 |
| Cockell C.S. | Originism: Ethics and Extraterrestrial Life | 147 |
| Collins P. | Economic Benefits of Space Tourism to Europe | 395 |
| Crater H.W. | The Mounds of Cydonia - A Case Study for Planetary SETI | 9 |
| Fabrega J. <i>et al</i> | Europe Goes to Venus: The Journey of Venus Express | 430 |
| Fawkes S. | Space Tourism and Sustainable Development | 401 |
| Fawkes S. | Carbon Dioxide Emissions Resulting from Space Tourism | 409 |
| Fearn D.G. <i>et al</i> | The Potential Applications of Small Electrically-Propelled Spacecraft to Low-Cost Interplanetary Missions | 72 |
| Fewer G. | Conserving Space Heritage: The Case of Tranquillity Base | 3 |
| Förstner R. <i>et al</i> | BepiColombo – Mission to Mercury | 314 |
| Gralla E.L. <i>et al</i> | Strategies for On-Orbit Assembly of Modular Spacecraft | 219 |
| Harvey B. | The Mars 6 Landing, 12 th March 1974 | 109 |
| Haviland R.P. | Requirements for Interstellar Travel | 228 |
| Hawkey A. | Low Magnitude, High Frequency Signals Could Reduce Bone Loss During Spaceflight | 278 |
| Hempsell M. | Requirement Generation for Space Infrastructure Systems | 350 |
| Hempsell M. | The Multi-Role Capsule as an Example of Function Based Requirement Generation | 358 |
| Hendrickx B. | The Soviet BOR-4 Spaceplanes and their Legacy | 90 |
| Hosek W.R. | Economics and the Fermi Paradox | 137 |
| Kezerashvili R. Ya <i>et al</i> | Solar Radiation and the Beryllium Hollow-Body Sail: 1. The Ionization and Disintegration Effects | 169 |
| Koenigsmann H. <i>et al</i> | The Falcon I Launch Vehicle – Steps to and Results from First Flight | 289 |
| Landau D.F. <i>et al</i> | Continuous Mars Habitation with a Limited Number of Cycler Vehicles | 122 |
| Liyin V.K. <i>et al</i> | Space Tourism and Safety from Infection | 419 |
| Matloff G.L. <i>et al</i> | Helios and Prometheus: A Solar/Nuclear Outer-Solar System Mission | 439 |
| McNab I.R. | Electromagnetic Launch to Space | 54 |
| Natarajan A. <i>et al</i> | Reconfiguration of a Nadir-Pointing 2-Craft Coulomb Tether | 209 |
| Peck M.A. <i>et al</i> | Spacecraft Formation Flying using Lorentz Forces | 263 |
| Pesavento P. | The Role of Human Intelligence in the USA's 1960s Efforts to Understand Soviet Space Activities | 460 |
| Peukert M. <i>et al</i> | System Design of Propulsion Systems for Moon or Planetary Descent Vehicles | 304 |
| Pluchino S. <i>et al</i> | Protecting the Moon Farside Radio-Telescopes from RFI Produced at the Future Lagrangian-Points Space Stations | 162 |
| Rowe W.J. | Moon Dust may Simulate Vascular Hazards of Urban Pollution | 133 |
| Saaj C.M. <i>et al</i> | Hybrid Propulsion System for Spacecraft Swarm Aggregation using Coulomb Force | 268 |
| Shepherd S.G. <i>et al</i> | Comment on "Applications for Deployed High Temperature Superconducting Coils in Spacecraft Engineering: A Review and Analysis" by J.C. Cocks <i>et al</i> | 129 |
| Shmatov M.L. | Some Thermonuclear Power Plants as the Possible Sources of He ³ for Space Propulsion Systems | 180 |
| Shuch H.P. <i>et al</i> | Shouting in the Jungle: The SETI Transmission Debate | 142 |
| Shuch H.P. <i>et al</i> | Testing a Claim of Extraterrestrial Technology | 154 |
| Smith C. <i>et al</i> | Free-Flyer Capture – New Robotic Challenges from the International Space Station | 339 |
| Spennemann D.H.R. <i>et al</i> | Technological Heritage on Mars: Towards a Future of Terrestrial Artifacts on the Martian Surface | 42 |
| Spennemann D.H.R. | The Opportunities for Star Tourism as a Motivation for Space Tourism | 414 |
| Struck C. | The Feasibility of Shading the Greenhouse with Dust Clouds at the Stable Lunar Lagrange Points | 82 |

AUTHOR INDEX - Contd

| | | |
|--------------------------|---|-----|
| Stull M.A. | The Feasibility of Linear Motors and High-Energy Thrusters for Massive Aerospace Vehicles | 449 |
| Taylor N.V. <i>et al</i> | Experimental Measurements of an Expansion Deflection Nozzle in Open Wake Mode | 377 |
| Webber H. <i>et al</i> | The Sensitivity of Precooled Air-Breathing Engine Performance to Heat Exchanger Design Parameters | 188 |
| Williams I.P. | Exploring the Solar System Beyond Neptune | 387 |
| Yarnoz D.G. <i>et al</i> | Trajectory Design for the Bepi-Colombo Mission to Mercury | 202 |

SUBJECT INDEX

| | | | | | |
|-------------------------|----------------------|------------------------------|-----------------------------|---------------------------|---|
| Apollo 11 | 3 | Jupiter | | Planets | |
| Apollo 15 | 133 | deep entry mission | 238 | Jupiter | 238 |
| Archaeology | 3,9,21,28 | stellar ignition | 257 | Mars | 9,109,331 |
| Asteroids | | Kuiper belt | 387,439 | Mercury | 202,314 |
| missions | 72 | Lagrange points | 162 | robotic exploration | 9,42,109, 202,314,430 |
| Astronomy | | Launch vehicles | | Venus | 238,430 |
| radio | 162 | air-launched | 367 | Power systems | |
| tourism | 414 | Aquarius | 367 | Mars missions | 294 |
| Bepi-Columbo | 202,314 | electromagnetic | 54,449 | solar | 63 |
| Black holes | 257 | Falcon 1 | 289 | Probiotics | 414 |
| Bone loss | 278 | French | 249 | Propulsion methods | |
| BOR 4 | 90 | laser beam | 449 | atmospheric | 188 |
| Buran | 90 | reusable | 188,390,443 | electric | 54,63,72,209, 263,268,449 |
| Capsule - manned | 358 | rocket nozzles | 377 | gravity control | 285 |
| CIA | 460 | Life sciences | | interstellar | 180,228,285 |
| Conservation | 3,42 | bone loss | 278 | laser beam | 449 |
| CORONA | 21 | extra-terrestrial | 137,147,154 | nuclear pulse | 180 |
| Earth | | Lunar dust hazard | 133 | planetary descent | 304 |
| environmental | 82,401,409 | radiation protection | 129 | rocket nozzles | 377 |
| observation | 21,28 | Magnetic radiation shielding | 129 | Solar sail | 169,439 |
| Economics | 137,350,395 | Manned spaceflight | | Radiation damage | 169 |
| Edgeworth-Kuiper belt | 387,439 | bone loss | 278 | Radiation shielding | 129 |
| Electric propulsion | 54,63,72, 439,449 | capsule | 358 | Radio telescope | 162 |
| Electrostatic control | 209,263,268 | disease transmission | 419 | Refuelling | 219 |
| Ethics | 147 | Lunar dust hazard | 133 | Relativity | 285 |
| Europe | | Mars missions | 122,294 | RTG power system | 294 |
| launch vehicles | 443 | radiation shielding | 129 | SABRE | 188 |
| space missions | 202,314,430 | physiology | 133,278 | San Marino scale | 142 |
| Excalibur | 358 | shuttle | 90 | Satellites | |
| Falcon 1 | 284 | tourism | 390,395,401, 409,414,419 | Earth observation | 21,28 |
| Fearn, David G. | 426 | Venus mission | 321 | French | 249 |
| Fermi paradox | 137 | Mars | | new technology | 63 |
| Formation flying | 209,263,268,339 | archaeology | 9 | SETI | |
| France | | Cydonia Mounds | 9 | Fermi paradox | 137 |
| satellites | 249 | history of missions | 42,109 | Mars - Cydonia | 9 |
| Heat exchangers | 188 | manned missions | 122,331 | methods | 28,154 |
| Heliopause | 439 | power systems | 294 | risk | 142 |
| Helium-3 production | 180 | surface habitat | 331 | Solar sail | 169,439 |
| History | 42,90,109,249,460 | Mars 6 | 109 | Solar shades | 82 |
| Image analysis | 28 | Mercury | | Space probes | 42,72,109,202,238, 304,314,387,430,439 |
| Infrastructure | | Bepi-Columbo probe | 202,314 | Space station | |
| assembly methods | 219 | Military | | ISS | 339 |
| large vehicles | 449 | CORONA | 21 | Sun | |
| manned capsule | 358 | Intelligence operations | 460 | black hole to extend life | 257 |
| Mars exploration | 294,331 | Microsatellites | | Tourism | 390,395,401,409,414,419 |
| refuelling | 219 | launch vehicle | 367 | USSR | 90,109,460 |
| requirements | 350 | Moon | | Venus | |
| Interstellar propulsion | 228,285 | dust hazard | 133 | manned mission | 321 |
| Interstellar travel | 228 | radio telescope | 162 | surface missions | 238 |
| Japan | | Tranquility Base | 3 | Venus Express | 430 |
| HTV | 339 | Orbital mechanics | 82,202,209, 263,268,321 | | |
